preservation takes place by compromising image quality . Here we will be discussing PNG, TIFF and JPEG formats and these are the very formats in which the wave file will be encrypted into.

MASTER IMAGE FORMATS

Sr. no	Image Format	Description in Brief
1	JPEG	JPEG compresses image files to great extent but at the cost of image quality.
2	TIF	TIF is a lossless compression format which is considered as industry standard.
3	PNG	PNG files are smaller than TIF(LZW compression) though both are lossless although it is slower to read or write to.[3]

2. Encryption

2.1. Obtaining data of wave file in column matrix

We will be using "dil.wav" wave file as a example whose wave representation is show above in fig 1. The sampling length of this tone is 2000000 samples. Following is the MATLAB code which fetches the wave file using 'wavread' function. Amplitude values are obtained in the range of 0 and +1.
